

Decision Dashboards & Management Analytics

Which numbers can you act on?

Build a management view around the decisions you need to make, with agreed measures and traceable source data.

For management and operational teams reconciling fragmented reporting sources.

START WITH SOURCES

Reports and exports
Owners and periods
Quality and gaps

**AGREE THE MEASURES**

KPI definitions
Calculation rules
Source traceability

**SUPPORT DECISIONS**

Trends and exceptions
Actions and owners
A review cadence

A key performance indicator (KPI) needs a definition, a reliable source and a decision to support.

What you take away

01	KPI and source model	Definitions, calculation rules, ownership and source-to-measure traceability.
02	Management dashboard	A focused view of trends, exceptions and the decisions they support.
03	Refresh and review process	Data-quality checks, refresh instructions and a practical management cadence.

Why AGILA

AGILA combines data and architecture work with the operating questions that make a dashboard useful.

A focused management dashboard and review process. Agree the sources, refresh frequency and ongoing support around the need.

Existing exports can be a useful starting point. Automate the data flow when the definitions and checks are stable.

Start with a report you cannot trust.

Bring the management questions and the sources used to answer them.
