Our expertise?

An offer based on 3 pillars

1 ONE PLATFORM

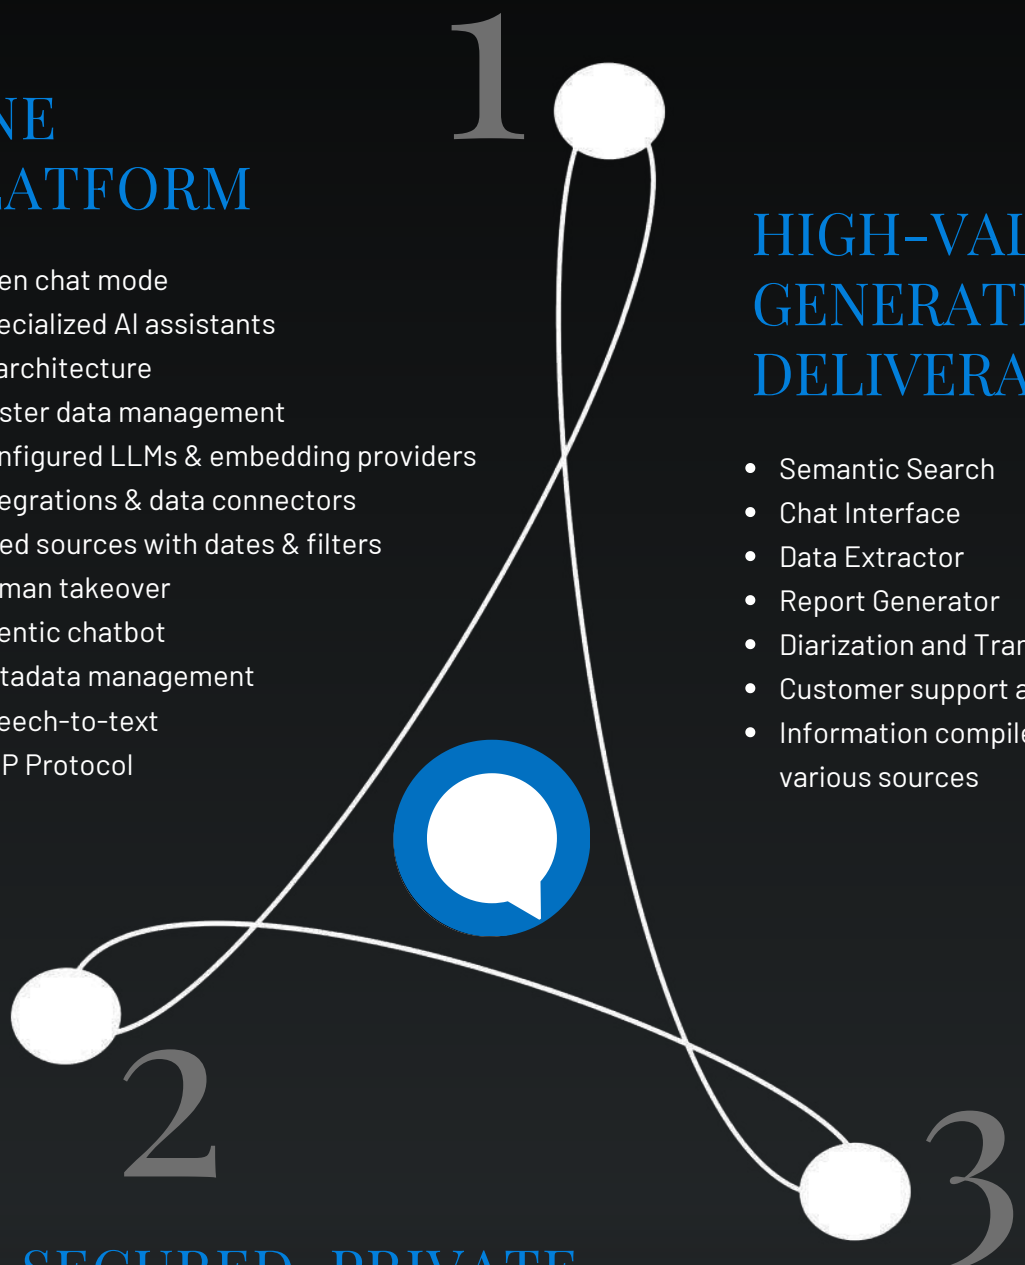

- Open chat mode
- Specialized AI assistants
- AI architecture
- Master data management
- Configured LLMs & embedding providers
- Integrations & data connectors
- Cited sources with dates & filters
- Human takeover
- Agentic chatbot
- Metadata management
- Speech-to-text
- MCP Protocol

2 SECURED, PRIVATE, COMPLIANT BY DESIGN

- Governance of taxonomy structures
- Data privacy, deletion and retention
- Configurable guardrails
- Jailbreak attempt prevention
- Secured authentication (OAuth)
- On-premises option

3 HIGH-VALUE, AI-GENERATED DELIVERABLES

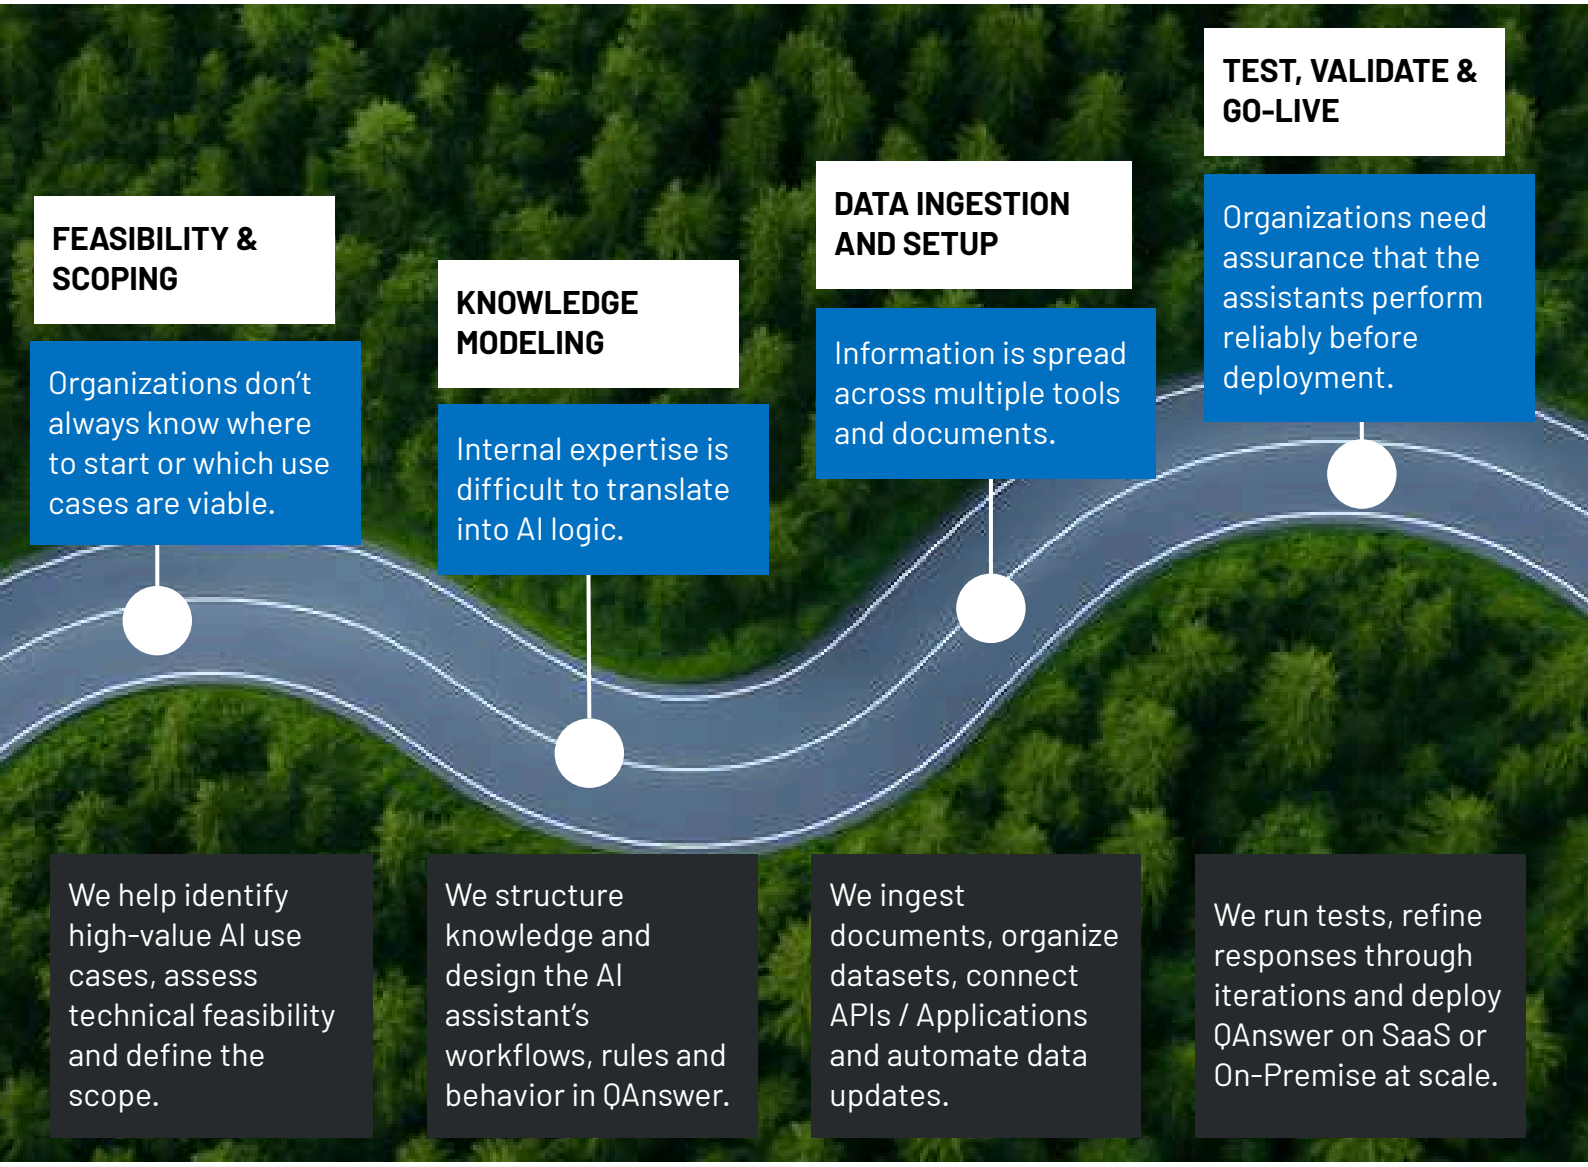

- Semantic Search
- Chat Interface
- Data Extractor
- Report Generator
- Diarization and Transcription
- Customer support assistance
- Information compiled from various sources

QAnswer®

How QAnswer helps in your AI journey?

AI is nothing without control

FEASIBILITY & SCOPING

Organizations don't always know where to start or which use cases are viable.

We help identify high-value AI use cases, assess technical feasibility and define the scope.

KNOWLEDGE MODELING

Internal expertise is difficult to translate into AI logic.

We structure knowledge and design the AI assistant's workflows, rules and behavior in QAnswer.

DATA INGESTION AND SETUP

Information is spread across multiple tools and documents.

We ingest documents, organize datasets, connect APIs / Applications and automate data updates.

TEST, VALIDATE & GO-LIVE

Organizations need assurance that the assistants perform reliably before deployment.

We run tests, refine responses through iterations and deploy QAnswer on SaaS or On-Premise at scale.

The QA Company is certified compliant with European standards.

Sensiba ISO/IEC 42001 Certified

Sensiba ISO/IEC 27001 Certified

GDPR

In Rockwell's own words

"QAnswer is an innovative, customizable, and very user-friendly AI tool perfect for private corporate data. QAnswer does not store any of your data which was a deal breaker for our group. Overall, QAnswer has been working far better for most of our teams than any other AI that we have tested."

Lydia Rasmussen
Research and Digital Asset, Management Librarian
