

Greenkeeper PLUS

*Your complete solution for
grassland maintenance*

Versatile

*Aerates, levels and controls
weeds in one operation.*

Efficient

*Saves time and costs with
combined functions.*

Sustainable

*High-quality, environmentally
friendly construction.*

Greenkeeper PLUS

The ZOCON Greenkeeper PLUS is an innovative agricultural implement developed by the Dutch company ZOCON. It is designed for grassland and crop management, with a strong focus on **sustainability and precision management**. The Greenkeeper PLUS combines multiple functions in one machine and is mainly used for **aerating, leveling and maintaining grassland**. This machine can improve the quality of the grassland by, among other things, promoting better root development, reducing compaction and combating unwanted vegetation.

Technical Specifications

- Working width: **3m, 6m and 8m**
- Transport width: **2715 mm (6m and 8m), 2900 mm (3m)**
- Material: **High-quality galvanised steel**
- Optional accessories:
 - Zocon seeder 150, 300 and 450L
 - Adjustable guide wheels front and rear
 - Lighting

Key Features

Completely galvanized, robust & modular frame with angle profile front side and open rearside for free passage, which prevents accumulation - **perfect as a (over)seeder**.

3 rows with 10mm strong double tines with 12-stage depth adjustment.

Skids and corner protection for basic protection of your grassland.

Optional accessories

Height adjustable guide wheels front and rear side (8-stages) for very precise adjustment and to sow like a professional.

Pneumatic Seeder
150L, 300L, 450L (with Basic, Isobus or Topcon control)
With integrated collector for quick/accurate calibration

LED Lighting / Stairs

Key functions and features

1

Aeration of the soil

The Greenkeeper PLUS has 10mm strong double tines that are pulled through the top layer. This technique promotes the absorption of oxygen, water and nutrients by the grass, resulting in a healthier root system and better grass growth. This also helps to reduce waterlogging and improves the drainage system.

Leveling of grassland

The robust frame makes the Greenkeeper PLUS effective in levelling out unevenness in the grassland. This levelling helps to maintain a more stable grass surface and ensures that the land can be used more evenly.

2

3

Removing unwanted vegetation

The machine also helps to combat weeds and moss. By using the strong 10mm tines, the Greenkeeper PLUS can effectively remove weeds, making more space and nutrients available for grass and desired vegetation.

Compact design and high durability

The ZOCON Greenkeeper PLUS is built with high-quality materials such as galvanized steel, which extends the life of the machine and reduces maintenance. The machine is relatively compact and easy to maneuver.

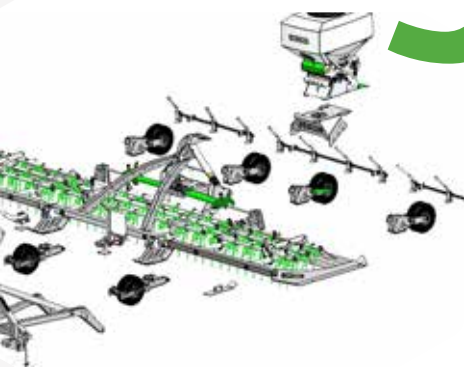

4

5

Adaptability and modular construction

The machine is available in various working widths, so that it can be used on various types of terrain and for various applications. The Greenkeeper PLUS can also be combined with other ZOCON accessories, such as the ZOCON seeder. The Greenkeeper PLUS can also be equipped with all kinds of extra options, such as height-adjustable wheels and LED lighting.

Applications

The ZOCON Greenkeeper PLUS is, due to the open frame at the back, extremely suitable for both grassland and arable land. It is used in dairy farming and by companies that manage grassland. With the versatility and efficiency of the Greenkeeper PLUS, users can optimally maintain their grassland and improve its quality.

Conclusion

The ZOCON Greenkeeper PLUS is a versatile machine that helps farmers and land managers maintain grassland effectively and sustainably. The device offers significant benefits for soil health, grass yield and environmental friendliness, and makes it possible to perform multiple tasks at once. The combination of aeration, leveling and weed control makes this a valuable investment for anyone who takes grassland management seriously and wants to get more out of their grassland.

Benefits for farmers and livestock keepers

- **Improved grass yield**
The aeration and leveling results in a healthier lawn with more yield per hectare. In addition, with the addition of the ZOCON built-up seeder, the lawn can be simultaneously reseeded.
- **Cost-saving**
Combining multiple functions in one machine saves time and maintenance costs, because fewer separate machines are needed.
- **Environmentally friendly**
By minimising chemical pesticides and improving the natural resistance of the grassland, the Greenkeeper PLUS helps to achieve more sustainable business operations.
- **Time saving**
By carrying out multiple operations at once, farmers spend less time on the land and the soil is less stressed.
