

## Applications

The grassland harrow can be equipped with the ZOCON Seeders to resow the meadows. This way, new grass can be sown directly, to ensure a grassland that becomes more dense and healthier. As a consequence, the grassland harrow changes into a multi-functional machine that executes multiple tasks in one passage. For a most optimal operation of the machine, ZOCON offers options as speed sensors or a ground wheel.

## Conclusion

The ZOCON Grassland Harrow offers livestock farmers a reliable solution for aerating, levelling and maintaining their grassland. Thanks to the robust, fully galvanised construction, the machine has a long life expectancy and the maintenance is limited. In combination with an optional ZOCON Seeder the machine can also resow, allowing multiple working tasks to be executed efficiently in one passage. In short, a durable and versatile machine for an optimal grassland management.

## Advantages for (livestock) farmers

- **Improved grass yield**  
Aerating and levelling out allows for a healthier grassland and a higher profit per hectare. In combination with a ZOCON Seeder the user can furthermore resow in the same time.
- **Cost-effective**  
Since multiple tasks can be executed with one machine, it saves precious time while also the costs of maintenance will be limited.
- **Futureproof machine**  
Thanks to the modular construction and the usage of high-quality materials, the machine has a long lifespan. Worn parts are easily replaced as a result of which the machine keeps performing after years of intensive use.
- **Time-saving**  
Because multiple operations are executed in one passage, the needed working time decreases and thus reducing the amount of pressuring the soil.

# Grassland Harrows

### Multi-functional

*Aerates, levels out and combats weeds in one passage.*

### Adjustable

*The mat can be flipped around for different applications.*

### Durable

*High-quality, environmentally friendly construction.*

# Grassland Harrows

The ZOCON Grassland Harrow is a traditional agricultural machine, but then in an improved, robust and reliable implementation. The special galvanized construction increases its life expectancy and allows it to effectively loosen the soil and levelling out the meadow. The heavy net ensures that unwished plant debris, moss and dead grass clippings are removed, whereafter the healthy grass can better develop. Next to that, the stars of the net are usable both sides, so that the grassland harrow can be used in different positions. The changement of the net is easy to execute by means of the U-brackets.

## Technical Specifications

- Working width: **5m, 6m and 8m**
- Transport width: **2310 mm**
- Material: **High-quality, galvanized steel**
- Optional accessoires:
  - **Zocon Seeder 150, 300 and 450L**
  - **Height adjustable wheels**
  - **Front linkage**

## Key features

Robust, modular and galvanized frame with reinforced corners and extra heavy hinges.

Heavy combi stars attached on 14mm thick rings that allow for solid impact on the ground.

Skids and corner protection for a basis of protection of the grassfield.

## Optional accessoires

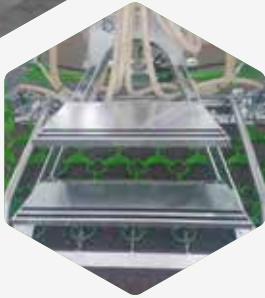

Extra wheels or skids frontside for a more precise installation based on personal preferences

**Pneumatic seeders**  
150L, 300L, 450L (Basic, Isobus or Topcon control)  
With integrated collector for a precise flow rate

Stairs for accession to the seeder

Front linkage for accoupling front + rear

## Key functions and features

1

### Aeration of the soil

The robust net improves the soil structure and aerates the ground. This way, water, nutrients and oxygen can penetrate the soil more freely. Next to that, the already existing grass has more space to develop, allowing it to grow stronger roots.

### Levelling of the grassland

Thanks to the strong frame, the ZOCON Grassland Harrow is extremely suitable for levelling out any irregularities that have arisen on the grassfield. It ensures a smooth plot, stimulates uniform growth of grass and improves an efficient use of the field.

3

### Removing unwanted vegetation

By means of the robust stars of with a thickness of 10 mm, moss, weeds and dead grass are loosened efficiently. This allows for more space for the healthy grasses to develop to their full potential.

2

### Compact design and high durability

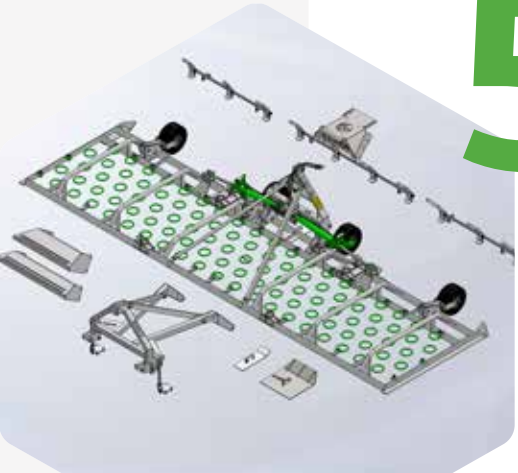

The ZOCON Grassland Harrow is developed out of high-quality, durable materials, under among a completely galvanized frame. This all extends the lifespan of the machine and reduces maintenance. The machine is easily manoeuvred because of its compactness.

4

### Adaptability and modular construction

The machine is available in multiple working widths, making it suitable for a wide range of applications. Next to that, the grassland harrow can be equipped with several ZOCON accessoires, such as the ZOCON Seeder, height-adjustable guide wheels or extra skids.
