

AI Hub for Professional Services

PR & B2B Marketing edition

Keeps human judgement in charge. Transforms the work with AI. Your workflows, agents and know-how behind one front door.

01 ONE FRONT DOOR

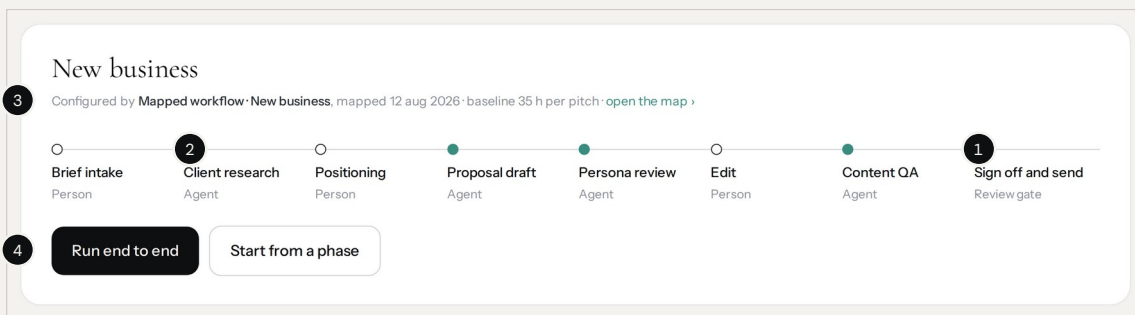

01 Say what you are working on. Plain words. The Hub suggests a plan and waits for you to confirm.

02 Add context. Company context is always on. Add a client card, a sector pack, or a file for this run only.

03 Suggested agency's work. Pitch a client, write a byline, research a prospect, review before it leaves.

02 REDESIGNED, INDUSTRY-SPECIFIC WORKFLOWS

Example: New business, from brief to sent proposal. One of the pre-built workflows; content and thought leadership follows the same pattern.

01 Person, Agent, Review gate. Every phase is marked. The workflow ends with a named person.

02 Agents inside the workflow. One job each, at the step where it belongs.

03 Configured by your mapped workflow. Mapped from interviews with your team, so it is truly yours.

04 Run end to end, or from any phase. First draft in the Hub, finished in your own tools.

DESIGN PARTNER · B2B TECH PR AGENCY · FIRST QUARTER IN PRODUCTION

A proposal drafted in a day
Previously one to two weeks

Prospect research in minutes
Previously days

03 PRE-BUILT AGENTS FOR PR & MARKETING

A sample of the portfolio. Each agent combines Kalei's engine, the PR & marketing overlay and your own company context ingested during onboarding.

PR client research	Sourced intelligence brief on any company: media, competitors, audience, whitespace, positioning.
GEO content optimiser	Will a piece be found and cited by answer engines?
Synthetic audience test	A persona panel reacts to a narrative before real people do.
Personal news desk	Your sectors, your clients, and a personalised 'so what' every morning.

The portfolio grows with every deployment. Bespoke agents can be built for workflows of your own.

Made yours

Onboarding maps your core workflow with the people who run it and fills one curated context pack: voice, clients, templates, house rules, governance. Every agent reads it. It is your IP: exportable, usable without Kalei.

Trust

Inputs are read for the run, never kept. Your context lives in your own encrypted space. Outputs go to your drive. Nothing trains any model.

How you pay

Onboarding is a fixed engagement: AI strategy, workflow mapping and your context pack. After that, you pay for what you use.

PILOT PRICING UNTIL 30 NOVEMBER 2026
