Facilitate the rehabilitation care pathway

Improve monitoring and autonomy of your patients

ON THE
PLATFORM
AND IN THE
ROOM!
#self-rehabilitation

1. In a healthcare facility

In the center, Axomove Therapy becomes the rehabilitation therapist's assistant:

- ✓ On the technical set, alone or in a group in front of the screen
- ✓ Open access or accompanied by a healthcare professional
- ✓ During therapeutic education sessions
- ✓ In your room: to continue the sessions independently on the weekend

Improve the care pathway and increase the autonomy of your patients to make them active participants in their rehabilitation.

#telerehabilitation

2. In Tele-rehabilitation

Telerehabilitation allows for the digitization of day hospitalization. Less travel for the patient, more flexibility for the center, but always the same quality of care!

Add telerehabilitation to your care offering with Axomove Therapy:

- ✓ Telehealth sessions with the patient at home, who may be accompanied by a caregiver
- ✓ Medical teleconsultations
- ✓ Continuous monitoring between home and center sessions

PRESERVE THE
ACHIEVEMENTS
OF THE CENTER
#self-rehabilitation

3. At home

Help your patients maintain their progress through self-rehabilitation and keep the link easily.

Axomove Therapy supports them in their return home:

- ✓ The patient carries out the programs you created for them at home.
- ✓ The practitioner monitors the patient's progress and adherence via health data.
- ✓ The link between hospital and community is facilitated through data sharing.
