Spider ScaleUnit

FeedStation scale

The Spider ScaleUnit weighs the cows while the cow is standing in the FeedStation to take her portion of concentrate feed.

Easy-to-read dashboard

The cow's weight is added directly in the dashboard of the Spider feeding system. This gives you real-time insight into the weight of your cows. You can also view weight progress over time or in combination with feed intake.

Cow-friendly scales

Cow weighing does not have to be a stressful moment. We prove that with this ScaleUnit in the feeding station. The cow simply does not notice she is being weighed while she quietly eats her concentrate. Stress-free for cow and farmer alike!
