

EQUIPMENT TRAILERS

DIR CRP10

Machine used for any type of carried tool; it is suitable for track-lying tractors. The frame structure, once the connections have been made, ensures the weight distribution in order to prevent the tractor from getting stuck or sliding during working by ensuring maximum grip on the ground, minimum traction stress and a considerable decrease of fuel consumption; during the driving the weights excellent balance does not affect the tractor bar in order to ensure its constant and perfect grip on the ground. It has a 1000-kg load capacity. It is provided with a working depth adjustment mechanical. system and all-purpose attachments for coupling with any type of machine.
