# Our family story

|      |                                                                                                                                                                                    |
|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1920 | Eric Harrouet's grandfather settled in St Julien de Concelles with 3 hectares.                                                                                                     |
| 1963 | Gilbert Harrouet, Eric's father, took over and created the VAL NANTAIS cooperative with other growers. This marked the beginning of the long history of market gardening in Nantes |
| 1988 | The farm now covers 30 hectares. Eric Harrouet takes over the family business.                                                                                                     |
| 1995 | Creation of an ERIPAC washing and packaging station, ERIPAC. It now covers 8,000m2.                                                                                                |
| 2003 | Arrival of the first greenhouse, 1Ha                                                                                                                                               |
| 2021 | Installation of Mathieu, 4th generation Harrouet, destined to take over the entire business                                                                                        |
| 2024 | Launch of the 4th range activity. Today, the farm has more than 350 hectares of open fields and 100 hectares of greenhouses.                                                       |

# Our production

Lamb's lettuce

Baby leaf mix

Baby leaf rocket

Baby leaf spinach

## Under cover growing

# What are the advantages of under cover growing?

- 🌿 Securing production against climatic issues
- 🌿 Managing water consumption
- 🌿 Controlling and reducing fertiliser use
- 🌿 Fewer tractors and machines
- 🌿 Better work's conditions
- 🌿 No fertiliser leaching, so less pollution
