EURO INDUSTRIES · BOOTH K16

Flash diagnostic

One of your documents analysed. Your priorities in 30 minutes.

Exclusive to Euro Industries visitors. Bring a working document: we analyse it with our tools, and an expert tells you in 30 minutes what is missing and where to start.

YOUR CHOICE

The instruction manual of one of your machines

Assessed against ISO EN 20607, chapter by chapter. You leave with the priority gaps, the relevant clause of the standard and a suggested correction for each.

A tender file you are working on

Public or private. Documents are sorted and award criteria extracted: you decide whether to bid without reading everything first.

A process only one person knows

Thirty minutes to see whether a tool makes sense for your company. If it does not, we will tell you.

HOW IT WORKS

1. Book a slot, or drop by booth K16.
2. Bring your document (PDF or Word), on your phone or by email.
3. An expert walks you through the analysis in 30 minutes.
4. You leave with a written list of your priorities.

No commitment. At the booth during the show, or by video call until 18 December 2026, subject to availability. Your documents stay confidential. A diagnostic is not a certificate of conformity.

ABOUT US

Optima AI builds AI-powered software for document-heavy tasks in industry: machine documentation, tender responses, and tools built around a specific trade. Our president, Mathieu Domon, spent 21 years with an inspection body, 15 of them as Key Account Director for Industry. Labelled Deep Tech by Bpifrance and Young Innovative Company (JEI).
