CALF AND FOAL TEATS

BORFLEX® SPCV designs teats for calves and foals using a rigorous manufacturing process and a natural rubber optimized formula, ensuring products of exceptional quality, free from nitrosamines and nitrosatable substances. Available in various sizes and hole configurations, these teats adapt to specific flow rates and are compatible with standard drinkers, floating stations and feeding bottles.

LAMB AND KID TEATS

BORFLEX® SPCV also offers teats for lambs. Like our calf teats, they are made from 100% natural dry rubber sourced from carefully selected rubber tree plantations and comply with European food safety requirements and standards. The texture of the rubber is soft and silky, the nipples are durable and resistant.

PUPPY TEATS

Available in bulk or as a kit including a bottle and its cap, our puppy teats are specially designed to adapt perfectly to the most sensitive puppies. Thanks to their flexibility and tear-resistant texture, they guarantee an easy and secure grip during feeding.

SILICONE KITTEN TEATS

Silicone teats, crafted from carefully selected raw materials and manufactured with precise expertise, offer excellent chemical properties and fully comply with current European food regulations. The injection molding process allows us to offer a wide range of more or less original shapes. Our teats are specially designed to suit the most sensitive kittens.
