

Performer Telescopic Conveyor

Versatile & future-proof solution

Adaptable and future-proof

The front can be configured for either loading, reversible or unloading processes.

Long extendibility

Components' durability ensures strength and structural load performance.

High throughput

Speed capacity of the Performer goes up to 0,8 m/second.

Versatile design

The configuration of your unit can be changed to suit the needs of your business.

Multiple cargo types

Suitable for various package types — paperbags, polybags, boxes and tyres.

Built with safety in mind

Built in safety features as standard ensures a safe, secure productive workplace.

Increase the ROI in short time

Experience short ROI with efficiency improvements and reduced operational costs.

Built to last

Every Caljan Performer has a 5-year structural warranty — testimony to quality.

Experience unmatched versatility with future-proof Caljan Performer

Bright, ergonomic work environment.

Caljan Performer is exceedingly comfortable to use; the low height ensures that operators work in an ergonomic environment. The low friction plate at the front of the Caljan Performer means that minimal effort is required to move each item onto the Telescopic Belt Conveyor.

Bespoke functionality

Caljan Performer is highly configurable. Over 100 optional functions ensure every delivery is custom-built to suit your specific application. This long list include gallow and floor rails for movability and ergonomic aids like articulating belt extension, operator platform, and safety pop-up roller.

Strong enough to carry up to 100 kg/m.

This flexible Telescopic Conveyor can transport any load the operator can lift. Up to 100 kg/m can be uniformly distributed along its length. Trolleys fitted with double bearings help spread the load of the telescopic sections, so the boom can extend correctly. Extending uniformly on either side prolongs lifetime.

Cost-effective use of labour

As packages can accumulate along the length of the extended Telescopic Conveyor, the presence of an operator is not required full time. A visual aid can be used to indicate when items can be offloaded. Just one person is required to handle high volume when loading — even at multiple doors.

Safest Telescopic Conveyor available

The Caljan Performer features full under-guarding to enclose moving parts and prevent trapping. Moulded edge fillers reduce pinching risk, while emergency stops at the front and rear ensure quick response. Non-driven pop-out rollers protect operators' hands, and a two-way anti-collision bumper halts movement if objects are detected in front or beneath the conveyor.

Future-proof solution that is easy to own

The strength of the Caljan Performer has been tested with Finite Element Analysis. It is built to last; every Caljan Performer is covered by a 5 year structural warranty. As your requirements change, the Telescopic Conveyor can be modified. The Universal Multi-Connector allows for a wide range of functions to be added at a later date, including heating, lifting aid and even an operator platform. It is also possible to add a traverse system, so that the Telescopic Conveyor can move between multiple doors.
