

Exaion AI Inference Platform

Market Challenges

AI is transforming enterprise operations. But unmanaged AI creates real risk.

Enterprises face four structural barriers to scaled AI adoption:

Shadow AI usage across departments

Data exposure

Unpredictable token costs

Regulatory pressure (NIS2, DORA, GDPR, Export Control)

Our Solution

A private, governed AI platform. Built for enterprise control. Exaion AI Inference Platform is a productized, managed inference and governance control plane running on a single tenant, in EU Data Centers.

Private Inference

Run AI on dedicated infrastructure with no data leaving your environment

Built-in Governance

Enforce policies, control access, and audit every interaction by default

Versioning

Run multiple versions side-by-side until your evaluation and transition is ready

Predictable Cost

Capacity-based pricing with full visibility across teams and usage

Integration

One OpenAI-compatible API to connect all applications and models

Security

Advanced data security and compliance

Targeted Benefits for Your Business Needs

Predictive Maintenance & Energy

Deploy operational intelligence and document automation for critical infrastructure

One gateway routing all AI traffic through central policy enforcement and cost visibility across business units

Financial Services & Compliance

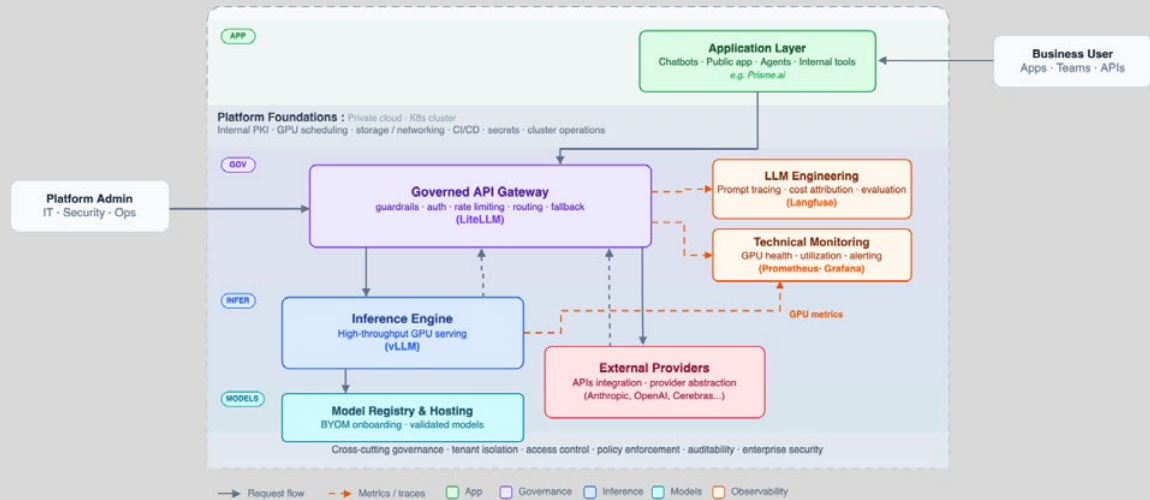

Automate claims processing, contract review, fraud detection, and risk modeling

Guarantee DORA and GDPR requirements with provable audit trails

Manufacturing & Défense

Optimize quality inspection, supply chain optimization, and documents processing

Secure sensitive industrial data through sovereign hosting

Success Story

Exaion deployed a secure, private cloud generative AI platform for the EDF Group — Europe's largest energy company.

- 3,000+ concurrent users access
- 15 active AI models daily
- 30 GPUs in production
- A single governed API
- Cost attribution per team
- Real-time infrastructure monitoring
- Technically sovereign EU Infrastructure
- Full audit train
