

Kando, the intelligent infrastructure for care environments.

NURSING HOME

HOSPITAL

AT HOME

Kando

The central platform for your care organization

Kando connects the tools already in place and makes them accessible through voice interaction. Documenting an observation, preparing a handover, managing a care plan assistants are activated according to the needs of the organization.

Kando Nurse Call

Turning nurse calls into actionable information

Residents can press their call button or use a wake word. Kando captures the context, qualifies the request, and routes it to the right person. Since 82% of calls are logistical in nature, Kando understands this before a caregiver even intervenes.

Kando Box

The in-room access point

A dedicated device, always available and always connected to both the platform and the television. Kando Box is there, right in the resident's room.

What makes Kando different

A sovereign technology stack, from hardware to AI models.

Proprietary AI models

A suite of proprietary, sovereign AI models developed and maintained internally, ensuring full control over performance, security, and data governance.

European HDS-certified hosting

All data is stored in Europe on HDS-certified servers, ensuring the highest levels of security, compliance, and sovereignty.

A system that improves with use

Kando continuously adapts to the realities of care delivery, learning from facility workflows, care patterns, and resident profiles within a fully GDPR compliant environment.

Interoperable with your existing software

Kando integrates seamlessly with your care management and operational systems, making them accessible through voice. Your data stays where it belongs in your existing applications.

Built for compliance

ISO 27001, NIS 2 et MDR compliance. GDPR compliant data processing is built directly into the underlying technology.
