

MANUFACTURER & ARCHITECT
OF YOUR SAFETY

INDUSTRIAL
FLEXIBLE PROTECTIONS
WITH SHAPE MEMORY

DESIGNED AND MANUFACTURED IN FRANCE

MANUFACTURER & architect

Because you deserve to work with peace of mind,
we create solutions for that make
your workspaces very safe.

Between us

For over 12 years, we have supported companies of all sizes and sectors, drawing on our deep understanding of diverse contexts and requirements.

Our convictions and commitments are rooted in a solid corporate culture focused on our clients, inspired by a family spirit where **satisfaction and serenity are our core values.**

Driven by genuine professional ethics and a strong sense of responsibility, we promote short supply chains and are committed to **100% French manufacturing**, from tooling to the finished product.

Our purpose

The safety of your sites, equipment, goods and, above all, your teams is our top priority. By listening closely, we provide customised solutions that meet your unique requirements. Guided by **commitment, passion and the quality of our work**, we strive for your satisfaction, taking your smile as the truest indicator of success.

Our commitments

With Protect Choc, your workspaces are safe.

Our sales team is driven by **sponsiveness**:

- competitive lead times through complete control of our production chain
- services tailored precisely to your requirements
- a deep understanding of your constraints and requests

Safety is the key to your peace of mind

Because **every company is different**, safety solutions for your workplace must be customised.

To guarantee your peace of mind, we create the optimal combinations, innovate to design superior products and manufacture with precision to guarantee efficiency.

This is what being both Manufacturer and Designer means to us at Protect Choc.

EXPERTISE & purpose

Our work is guided by strong values that inspire our teams:

- people, relationships and positivity at the heart of everything we do
- know-how and pride in a job well done, ensuring top quality results
- responsibility, through a reduced carbon footprint thanks to short supply chains and, more broadly, by upholding our commitments

Enjoy peace of mind!

Your teams are protected by our installations, ensuring safe working in shared environments:

- buildings and equipment safeguarded against impacts from handling vehicles
- high-performance products and long-lasting service quality
- lower repair costs and reduced maintenance downtime

INDUSTRIAL culture

Passion and industrial culture are part of our DNA, driving us forward every day by your side.

Embracing our industrial culture means **valuing the engineering expertise** behind every solution we design, echoing the same passion you bring to your own field. It also means embracing a model and sharing the highest standards of quality, consistency and reliability.

We are proud to be modernising our production tools thanks to support from the French **"Industry of the Future"** programme, which recognised the strength of our project and helped finance our new equipment and tooling. Today, we design and build tailored production systems (conveyors, robots and presses) that now equip our site for the machining of our profiles, in order to provide you with the highest levels of performance.

More than just a mere statement, Protect Choc's industrial culture fuels the collective energy of a dynamic **"Made in France"** momentum, bringing you:

- guarantees regarding our commitments and the quality of our solutions
- growth opportunities supported by our capacity for innovation
- concrete responses to your safety challenges: safeguarding facilities, protecting property and people and managing "blind spots" with limited visibility, which are therefore more accident prone

Naturally, at a time when Corporate Social Responsibility is a central part of industrial strategy, we are committed to an approach that is as socially, economically and environmentally responsible as possible, aiming for a minimal carbon footprint.

Local partnerships, short supply chains and recycling are at the heart of our operations.

With safety as our guiding principle, we've developed a full range of **"ClassiFlex"**, **"MegaFlex"** and **"NoGap"** protection systems, alongside our **"LightUs"** detection and alert systems.

Recovery plan

This project has been funded by the French government as part of the recovery plan.

CLASSI OR Mega?

Two distinct yet complementary ranges:

Providing solutions to your concrete needs —regardless of the configuration— is at the heart of what we do.

These two ranges offer both freedom and modularity, allowing us to work closely with you to develop the most suitable configurations while balancing budget, functionality and performance.

ClassiFlex barriers

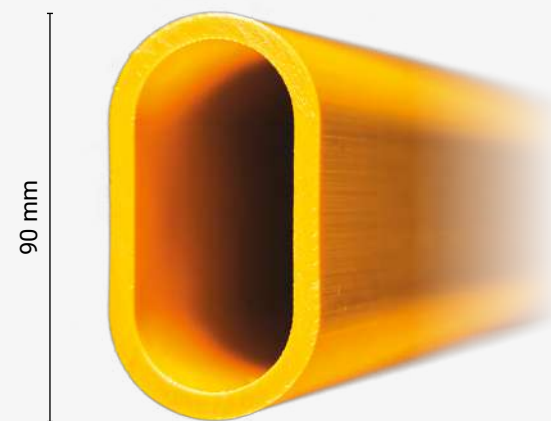

Classi**FLEX**™

Mega**FLEX**™

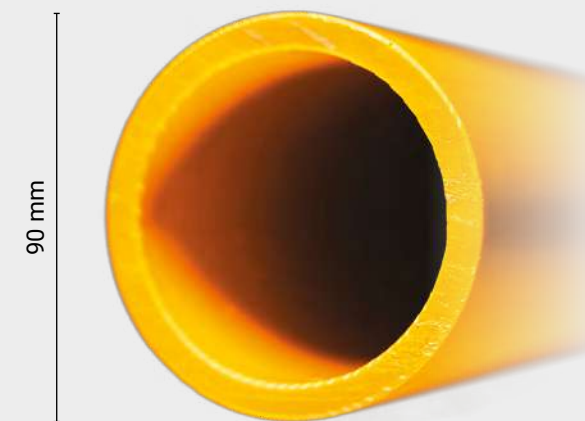

Shared features

- Impact energy absorbed by the barrier, not the floor = preservation of your surfaces and extending the life of your installations
- Easy to clean, thanks to oblong and cylindrical rails with smooth surfaces that prevent the build-up of dust and dirt
- Easy assembly, optimised through a reduced number of components
- Low-profile fixings (only the head remains visible)
- Corrosion-resistant base plates, cataphoresis-treated
- Outstanding modularity, enabling easy adaptation as your business evolves

Distinctive features

The oblong shape of Protect Choc's **ClassiFlex** range delivers excellent strength while optimising material use. Alongside its elegant design that blends seamlessly into any environment, the oblong form enables high-performance flexible barriers at an optimal cost.

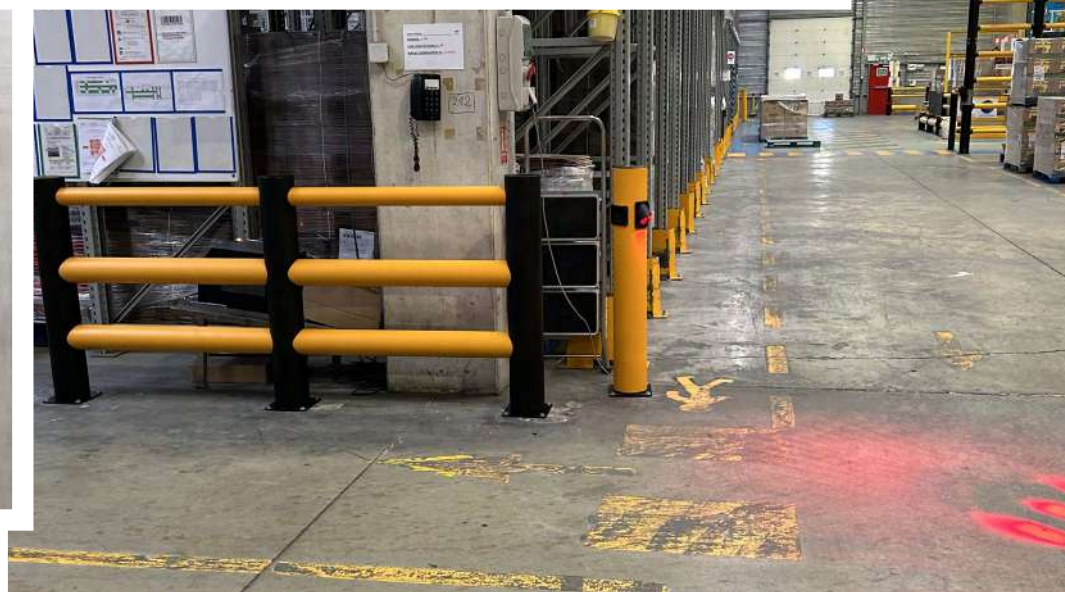

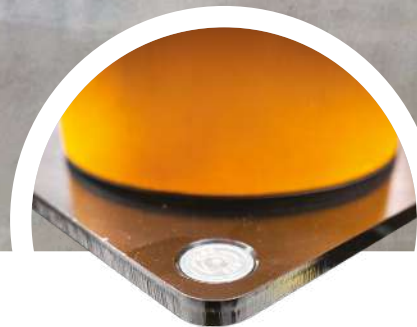

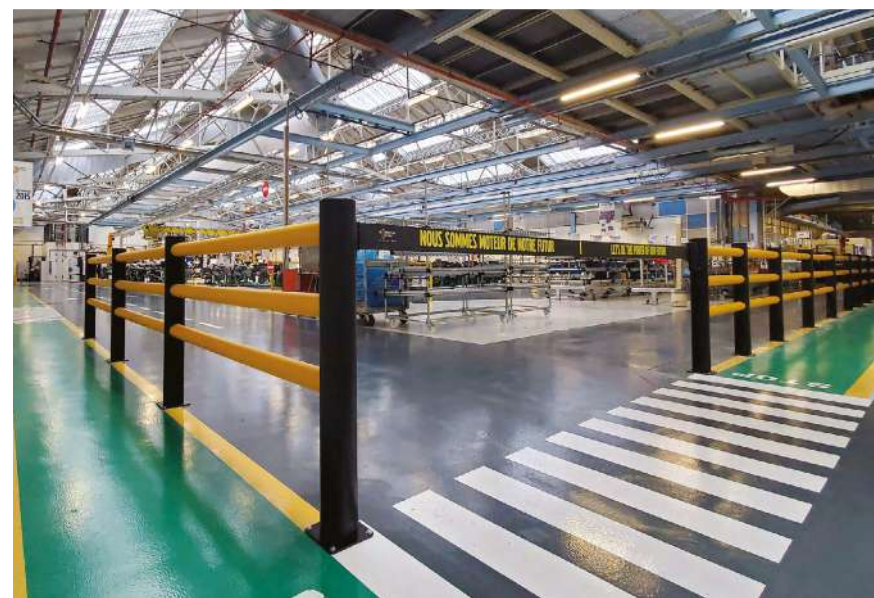

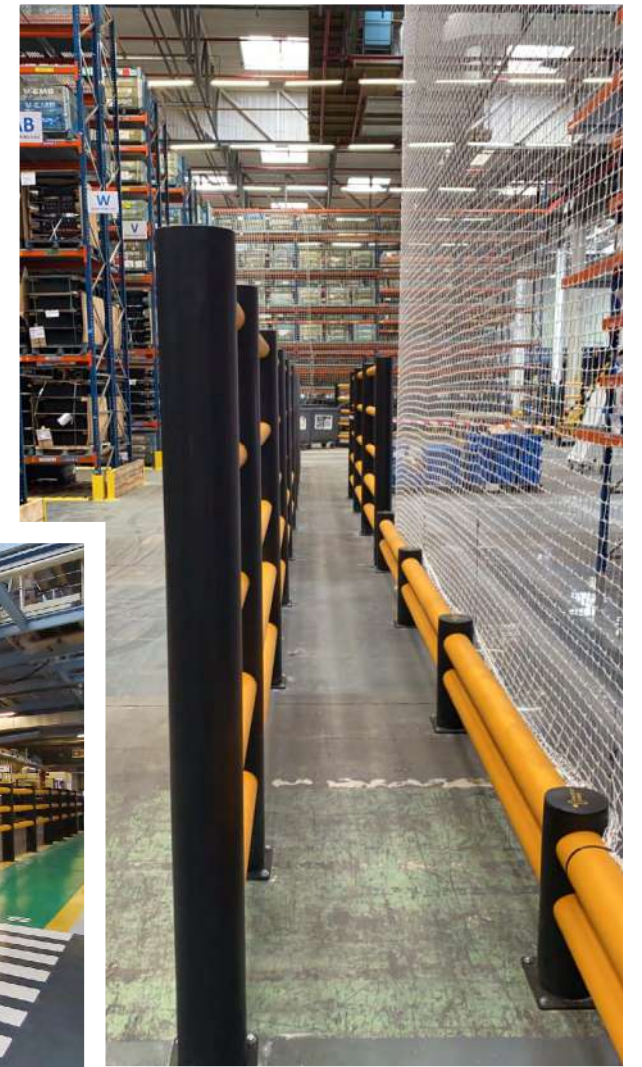

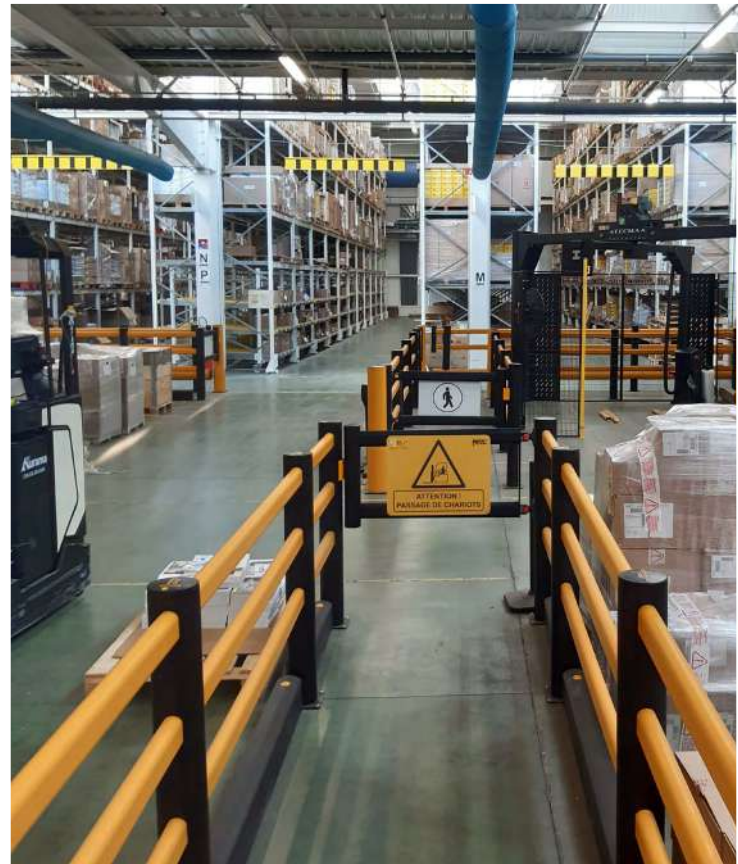

With its cylindrical geometry, the **MegaFlex** range delivers enhanced resistance to address the specific challenges and areas of your site. The increased wall thickness on this range provides greater energy absorption, ensuring maximum protection in the event of a high-intensity impact. Choose **MegaFlex** for maximum safety.

DESIGNED AND MANUFACTURED IN FRANCE

FOR THE agri-food and organic industries

Watertight solution

NoGap.TM

To meet the hygiene requirements of the **agri-food and organic industries**, we developed the **NoGap** system (seamless barrier).
Its fully sealed interface prevents water and debris from entering the barrier.

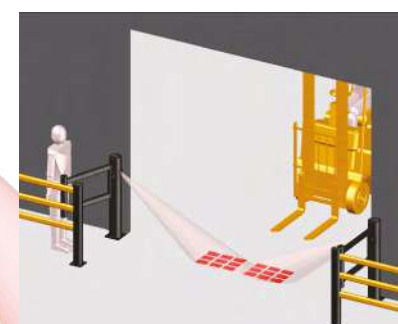

› **No infiltration, no water stagnation**
= **no risk of bacterial growth.**

TO GO ever further

Light USTM
Detect, warn

Infrared pulse detection & alert systems
(LIDAR technology)

› To prevent pedestrian-forklift accidents

We developed "**Le Phare**" [Beacon], a pedestrian detection solution designed for installation at any crossing point (hazardous intersections, walkways, etc.), either independently or integrated with a gate.

The detector-alert senses pedestrian presence and emits a highly visible **red flashing light**, which is projected onto the floor, alerting forklift operators.

› To prevent damage to high doors

We designed "**Les Lanternes**" [Lanterns], a system that warns forklift operators when approaching a door with an excessively tall load or raised mast.

This detector-alert system uses infrared pulses to identify incoming forklifts from the front or sides.

Sensor data triggers highly visible light alerts for the forklift operators.

Our systems are fully adjustable to fit your specific environment.

INNOVATING to anticipate your needs

At Protect Choc, innovation is a constant driving force, deeply embedded in our DNA. We don't just create new products; we rethink how to keep your workspaces safe in a constantly evolving industrial world.

Every day, our teams explore, experiment and perfect solutions to make our systems more intelligent, efficient and adapted to practical conditions.

Our strength:

close collaboration between design, production and clients to develop innovations that are both functional and long-lasting.

BESPOKE DESIGN: our design office at your side

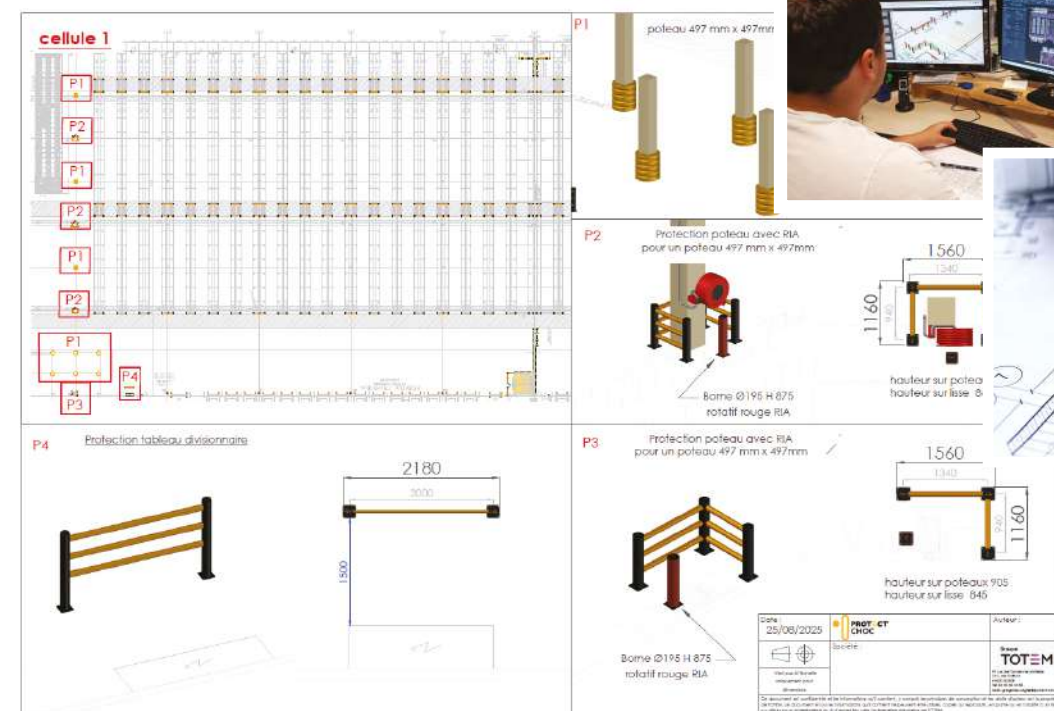

Every project begins by carefully listening to your needs. Our design office takes your constraints and priorities into account to create perfectly tailored solutions.

This is where your protective systems are conceived, combining technical excellence, innovation, reliability and visual appeal.

Our approach

- A personalised study of your site
- Plans adapted to your workflows, sensitive areas and technical constraints
- Direct collaboration with our production teams to ensure feasibility and responsiveness

Our design office is more than a service—
it's your partner in workspace safety.

INSPECTIONS & TESTING

safety is never left to chance

Reliability is a promise we keep. Protect Choc products undergo rigorous testing under the supervision of Bureau Veritas to ensure their performance in real-world conditions.

We invest in advanced testing equipment, including Charpy impact testers and other tools in development, to accurately measure the shock-absorption capabilities of our protective systems.

› Our commitments

- A personalised study of your site
- Plans adapted to your workflows, sensitive areas and technical constraints
- Direct collaboration with our production teams to ensure feasibility and responsiveness

We are relentless in our pursuit of quality, because your safety deserves the very best.

COMPLETE

from design to installation

› Listening & field study

Meeting with our technical sales team, analysing workflows, taking your challenges into account

› Plans & personalised quote

Technical recommendations, layout simulations, personalised quote.

› Manufacturing & quality control

Produced in our workshop in France with integrated quality checks.

› Installation & support

Fitted by our experienced, flexible teams trained to meet your requirements.

› After-sales service & trusted relationship

A dedicated contact person and responsive support for lasting peace of mind.

WHAT THEY SAY about us

We greatly appreciate **Protect Choc's** thorough and consistent approach to safety. To achieve the most effective installations, we rely on their commitment to quality, rigour and extensive experience.

The fact that the barriers are **Made in France** is certainly a standout feature for us.

Before partnering with Protect Choc, we were very demanding regarding product reliability.

Today, they consistently meet our expectations for quality, cost and delivery times. They also provide excellent guidance and continually seek new solutions to secure our work environments.

On a personal note, I particularly value the trust-based relationship that has developed between our two companies.

For us, **Protect Choc's** strengths are their local presence, high availability, flexibility and the professionalism of their technical team.

The product benefits that appealed to us were ease of installation, simplicity and robustness.
