INTELLIGENT IOT PLATFORM TO IMPROVE FIELD SAFETY AND MISSION OUTCOMES

Enable automatic alerts through integrated biometric data sensors

In high-risk situations, every second counts. Wearin' integrates lightweight, easy-to-use connected sensors and devices into agents' gear to capture real-time data for improved mission insights, without compromising mobility, functionality or comfort.

Two-way data flows, automatic alerts and biometric-based alarms from our **AI-driven platform** help to improve unit coordination and response times. A digital image of each agent increases situational awareness and empowers Command and Control to make tactical decisions based on real-time data, while predictive analytics helps to avoid risks before they happen. With secure, end-to-end data encryption, Wearin' protects sensitive information and the people it belongs to.

“ Specific events or biometric/contextual data trigger live video streams from bodycams. ”

IN COLLABORATION WITH

BIOMETRIC-BASED ALARMS
Detect acute stress and automatically generate alarms

AGENT PROTECTION
React immediately to emergencies

SITUATIONAL AWARENESS
Monitor agents' location and status of health in real-time and improve team communication

ACCELERATED SUPPORT RESPONSE
Increase safety of operations with automatic alerts

ADVANCED DATA ENCRYPTION
Protect sensitive data with end-to-end encryption and secure boot loader

EASE OF USE
Power all sensors and devices with a single battery for a full day

GDPR COMPLIANCE
Respect user privacy at all times

MODULAR, INTEGRATED SENSORS

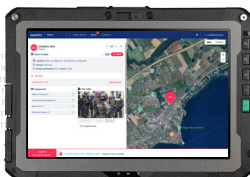

Improve coordination and response times with real time, two-way data flows and automatic alerts
